What is a colostomy?

A stoma is a surgically created opening which connects your intestines to the outside of your body. A colostomy is a stoma formed from bringing part of your colon (large bowel) out onto the front of your abdomen. The colostomy diverts the flow of stool out of the body and into a stoma bag and can be formed along any part of the colon. The output from a colostomy tends to be more formed, depending on the location of your stoma along the colon.

1. Oesophagus
2. Small Intestine
3. Large Intestine (Colon)
4. Rectum
5. Anus
C. Colostomy

Dietary Advice following the formation of a colostomy

The formation of the colostomy has minimal impact on digestion and absorption of fluids and nutrition in most cases. Most patients are able to follow a normal, healthy, balanced diet based on the ‘Eat Well Guide’. It is also important to aim to drink 6-8 glasses or approximately 2L of fluid each day.

Everybody is different in the foods they are able to tolerate, with or without a stoma. Trial and error of different foods is a useful method in working out if there are any foods that may cause you any digestive issues. Some people may find that they struggle to tolerate foods which they frequently enjoyed before they had a colostomy. It is important to note that the bowel adapts and these issues will often resolve with time.
Below is a table of other more frequently reported symptoms and foods that may be causing the trouble:

<table>
<thead>
<tr>
<th>Foods that may cause loose stools</th>
<th>High fibre foods (e.g. wholemeal/wholegrains, raw fruit and vegetables)</th>
<th>High fat foods</th>
<th>Alcohol</th>
<th>Caffeinated drinks</th>
<th>Fruit juice</th>
<th>Spicy foods</th>
</tr>
</thead>
<tbody>
<tr>
<td>Foods that may cause odour</td>
<td>Brassica vegetables e.g. cauliflower, broccoli, cabbage</td>
<td>Garlic and onions</td>
<td>Beans, peas and pulses</td>
<td>Eggs</td>
<td>Fish</td>
<td>Alcohol</td>
</tr>
<tr>
<td>Foods that may cause wind</td>
<td>Brassica vegetables e.g. cauliflower, broccoli, cabbage</td>
<td>Garlic and onions</td>
<td>Beans, peas and pulses</td>
<td>Fizzy drinks</td>
<td>Chewing gum</td>
<td></td>
</tr>
<tr>
<td>Foods that can thicken stoma output</td>
<td>Ripe banana</td>
<td>Boiled rice or pasta</td>
<td>Marshmallows or jelly babies</td>
<td>Smooth peanut butter</td>
<td>Apple sauce</td>
<td></td>
</tr>
</tbody>
</table>

Post colostomy formation, you may wish to adopt a gradual approach to fibre reintroduction to minimise the risk of obstruction.

If your stoma blocks - **STOP** eating. Continue to drink plenty of fluids as this will help the blockage to pass. If the symptoms persist for more than 12 hours, call your GP or stoma nurse.

If you would like more information, please speak with your UHL Consultant or GP for a referral to a Dietitian.
